

Mary Salnikova

Target role: AI Agent / LLM Engineer Intern

Email: mary.snikk@gmail.com · +86 15936206441 · [LinkedIn](#) · [GitHub](#) · [Personal Site](#)

Education

Zhengzhou University | School of Computer Science and Artificial Intelligence · BSc in Computer Science and Technology · Sep 2024 – Jun 2028 (expected)

Skills

- **Programming and CS fundamentals:** Python; DSA, operating systems, computer networks, databases, and concurrency; basic Java, C, JavaScript.
 - **LLM and Agent applications:** LLM APIs, structured outputs, prompt/context engineering, tool calling, agent loops, streaming; RAG fundamentals (chunking, embeddings, vector search, reranking); LangChain, LangGraph, MCP, memory, and agent evaluation.
 - **Backend development:** FastAPI, Pydantic, SQLAlchemy, Alembic, REST, PostgreSQL, SQLite; async Python, JWT/RBAC, validation, and error handling.
 - **Data, caching, and background jobs:** Redis, RQ, SQL; caching, background jobs, retries, rate limiting, idempotency, and job states.
 - **Reliability and testing:** pytest, logging, output validation, failure handling, retries, audit logging, and AI/backend workflow testing.
 - **Engineering tools:** Linux, Git, GitHub Actions, Docker, systemd, and OpenAPI.
-

Projects

[AI Customer Support Ticket System | AI support backend · Jun–Aug 2026](#)

Tech stack: Python · FastAPI · PostgreSQL · Redis · RQ · SQLAlchemy · JWT · pytest

- Built JWT access/refresh auth, RBAC, tickets, comments, attachments, SLA tracking, audit events, and AI summary workflows.
- Used separate Redis/RQ queues for routing and background analysis with retries and rate limiting.
- Persisted AI summary states (PENDING, COMPLETED, FAILED) across API, worker, and frontend; 313 backend tests.

[Document Summary | Document summarization & extraction · Apr 2026](#)

Tech stack: Python · FastAPI · Streamlit · SQLite · Pydantic · pytest

- Built summarization and structured extraction for PDF, DOCX, TXT, HTML, and CSV with chunking, validation, and persistence.
- Stored AI output, field sources, warnings, and human corrections separately; exports JSON, CSV, Markdown, and DOCX.
- Added an offline demo; 115 tests run without external model services.

[Reckoning | Local-first personal Agent · Jul 2026–present](#)

Tech stack: Python · SQLite · Telegram · pytest · systemd · LLM APIs

- Building a local-first Agent with conversations, durable memory, retrieval, scheduled jobs, and a Telegram gateway.
 - Adding read-only retrieval tools, memory proposals, and approval gates for safer external actions.
-

Awards and activities

AIY Shenzhen Hackathon 2026 | 1st Place · Project 拾安: Co-developed and presented an AI software project with a team.

iGEM 2025 | Gold Medal · ZZU-China Team: React frontend development for a synthetic biology platform.
